# atFAX™

Solution Overview

atFAX enables organisations to send and receive faxes without any onsite fax machines, MFD fax kits or fax servers/appliances.

End users once registered can send faxes via their email client such as Microsoft Outlook by attaching a PDF document and sending to the specific atFAX domain (cloudfax.co.nz).

Faxes can also be sent via a MFD's utilising the fax GUI using specific atFAX setup and/or firmware. Inbound faxes for each DDI (fax line) can be routed to specific email addresses, delivering the faxes by PDF attachment. Faxes may also be routed directly to any printing device.
